

What's New in Onyx 7.9?

Onyx 7.9 has been certified on the latest platforms including Windows 2019 and Microsoft SQL Server 2019. Running Onyx on the most up-to-date technology ensures that you get the best performance as well as stability and security from your Onyx solution.

We've made improvements to Onyx Navigator to give you a more powerful search experience.

There is more control over date ranges when you search, meaning you can limit your results to just those you need to see and not waste valuable time scrolling through irrelevant data.

The user toolbox in the result grids is now also fully configurable. Onyx Administrators can now include custom bulk actions in the toolbox so users can quickly and easily access their most commonly used actions and workflow steps.

Updates to the Mobile Scripting feature ensure a consistent experience of workflow scripts across the Onyx Employee Portal and the Onyx Mobile iOS or Android apps, for a reliable experience wherever you access your data.

Thank you for your continuing feedback. Please keep sending this through and we will keep listening and driving Onyx forward to meet your needs. You can expect more frequent updates to Onyx through our new Factory development model, keeping your business at the cutting edge of innovation and ahead of the game.

To learn more about Onyx 7.9, ask your Account Manager or contact us at info@avolin.com. We're looking forward to helping you on the road to true CRM efficiency.
